

CCNA Chapter 9 - Subnetting Part 1

Definition of subnetting.

Benefits: Performance, Security, Organization.

Subnetting is done by changing the subnet mask.

Router or Layer-3 Switch is required for communication between subnets.

ACLs can later control which departments communicate.

Example departments:

HR: 192.168.1.0

Sales: 192.168.2.0

Accounting: 192.168.3.0
