

CCNA 200-301 - Chapter 17: Static Route Notes

Default Route

Default Route is a special Static Route used to forward unknown destinations to a default next hop (usually ISP).

```
ip route 0.0.0.0 0.0.0.0 <Next-Hop-IP>
```

Example: `ip route 0.0.0.0 0.0.0.0 172.16.2.2`

Administrative Distance

- Connected=0
- Static=1
- OSPF=110
- RIP=120
- Unknown=255

Static Route Commands

```
ip route <network> <mask> <next-hop>
```

```
ip route <network> <mask> <interface>
```

```
no ip route <network> <mask> <next-hop>
```

Notes

- Static routing is manual.
- Default Route belongs to Static Routing.
- Using Next-Hop is recommended.
